

# HFCFS Compost Filter Sock

Hall Farms Compost Filter Sock (CFS) is an open mesh fabric tube, filled with compost ground organic material such as yardwaster, and land cleaning debris. It's an environmentally friendly product that either settles out or filters out sediment from run-off water on job sites during rain events. It can be used as a direct replacement for silt fences

## Specifications

### Physical

Name	Diameter (inches)	Length (feet)	Netting Type
HFCFS9	8	10	*HDMFPP
HFCFS180	8	180	*HDMFPP
HFCFS12	12	110	*HDMFPP

\*Heavy Duty Multi-Filament Polypropylene (HDMFPP)

### Properties

Property	Value
Color	Black
Application	Palletized Manufacturing Rugged Field Installation
Packing	Rolls
Material Characteristics	Photodegradable
Mesh Opening	1/8"
Strength	ASTM 5035: 222 PSI
UV Stability	ASTM G-155: 100% at 1000 Hours
Minimum Functional Longevity	2 Years

\*Life Expectancy will vary with your type of application, region and local climatic conditions and should be used as a guide only.
