

HFSW Straw Wattles

Hall Farms Straw Wattles are manufactured with a 100% wheat straw matrix using a Heavy-Duty Poly-Propylene Grid Casing. They are designed to filter sediment out of water before entering storm drain inlets. They also serve as a function method of slowing down the velocity of water runoff in channels and slopes

Product specifications

Physical information

Name	Diameter	Length (ft)	Density (lb/ft ³)	Netting Type
S-9X25	9	25	4.58 +/- 10%	Heavy Duty - Poly Propylene Grid
S-12-20	12	20	4.58 +/- 10%	Heavy Duty - Poly Propylene Grid

Netting Properties

Property	Units	Typical Value
Tensile Strength / Max Load	Lbs / strand	4.6
Approximate Life	Months	24-60

*Life Expectancy will vary with your type of application, region and local climactic conditions and should be used as a guide only.
